Potential competing interests: No potential competing interests to declare.

In the review manuscript, hydroxyapatite coatings techniques on titanium dental implants were summarized. Manuscript has scientific merits but requires some major changes by the authors. Please find my comments below:

- 1) The English grammar in this paper has to be improved for the reconsideration of publication
- 2) Paper should include future directions. Suggestions for future studies should be provided.
- 3) I suggest adding the conclusion part.
- 4) The manuscript is visually very poor. The quality should be increased by adding tables, diagrams and figures.

Recommendation: Major revision is required.
