Review of: "Closed Subspaces of Multi-Indexed Sequences over a Field"

Felipe Longo¹

1. Universidade Estadual de Campinas, Brazil

The authors present a well-constructed work with very interesting results. The writing is really good and easy to read. The main concepts are properly exposed and explained. In short, this is a great paper.

However, presenting a motivation for this study would make it even better. Perhaps presenting its applicability to other theories. For instance, from the references, it seems to be useful for discrete dynamical systems.
