Potential competing interests: No potential competing interests to declare.

Although the manuscript is written in very fluid and lucid English, it is written more like a textbook than like a scientific article.

Section 3.1: In the equation, parameters such as H_s and H_f are written the same.

Section 9: Case studies are written in a fragmented way; they can be more conglomerated or can be written in different sub-sections.

Case studies from Egypt can be compared with case studies from countries around the world to achieve better mitigation strategies.
