

# Review of: "Design of an intelligent controller for improving the solar system efficiency"

Amritha Kodakkal

Potential competing interests: No potential competing interests to declare.

1. Proper literature survey is to be done.
2. Many sentences are not complete, due to which the meaning of the sentence is not clear. For example, the 7<sup>th</sup> line in the abstract and many similar lines.
3. The figures 3a & b mentioned on page 7 do not match with what is explained in the text.
4. The simulation results can be better explained by mentioning what exactly the analysis of the graphs shows.
5. The X & Y-axis quantities in figures 3a & b can be checked.
6. How can the voltage be termed as tension? Please explain.
7. The advantage of fuzzy logic over the P&O method is already written in many papers. What is the unique result that this paper wants to project?
