I read with great interest the Manuscript titled "Histopathological Patterns of Cervical Cancer Among Females Presenting to Makerere University Pathology Core Reference Laboratory. A 5-Year Review" which falls within the aim of the Journal.

In my honest opinion, the topic is interesting enough to attract the readers' attention. Methodology is accurate and conclusions are supported by the data analysis. Nevertheless, authors should clarify some point and improve the discussion citing relevant and novel key articles about the topic.

- The whole text should be corrected by a native English speaker in order to make the work clearer and more readable.
- The introduction should be extended and completed. I find interesting a reference to the efforts made for the prevention and early diagnosis of gynecological cancers (see PMID: 36141217)
- I also suggest authors to better organize the discussion section following this ideal structure: main findings of the study, strength and limitations of the study, implications and comparison with literature, future directions.
- Discussions can be expanded and improved by citing relevant articles (I suggest authors to read and insert in references the following article PMID: 35742340).

Considered all these points, I think it could be of interest for the readers and, in my opinion, it deserves the priority to be published after minor revisions.
