Review of: "Prey Selection of the Invasive Gastropod *Rapana venosa* (Valenciennes 1846) from the Río de la Plata Estuary Under Laboratory Conditions"

Leandro Bergamino¹

1. Universidad de la República, Uruguay

This work presents a feeding experiment under controlled laboratory conditions to evaluate prey selection by *Rapana venosa*, using two bivalve species (*Erodona mactroides* and *Mytilus edulis*). The experimental approach provides useful insights into the feeding behavior of *R. venosa*, particularly its consistent preference for *E. mactroides*.

I consider this a relevant and promising contribution to understanding the trophic ecology of *R. venosa* in South Atlantic coastal systems. Furthermore, I think that this is a very legitimate and promising approach to assess feeding preferences.
