Potential competing interests: No potential competing interests to declare.

To provide more detailed suggestions for enhancing the text, the author should consider the following points with examples:

- 1. Clarity and Precision in Methodology Description:
- Instead of stating "GIS technology was used for mapping," the authors should specify the exact GIS software and version utilized (e.g., "ArcGIS 10.5 was employed for spatial mapping and analysis").
- Provide details on the sampling strategy, such as the sampling frame, sample size determination, and any sampling biases addressed during data collection.
- 2. Incorporation of Relevant Literature:
- Integrate recent studies on urban agroecosystems from diverse geographical contexts to compare and contrast findings, demonstrating the global relevance of the research.
- Discuss theoretical frameworks such as agroecology, sustainable development, or urban planning to contextualize the study within broader academic debates.
- 3. Data Interpretation and Analysis:
- Instead of merely presenting statistical results, interpret the data by explaining the significance of key findings in relation to existing literature and theoretical frameworks.
- Use visual aids such as graphs or tables to illustrate complex data patterns and facilitate a better understanding of the results.
- 4. Language and Writing Style:
- Ensure that scientific terminology is defined or explained for readers who may not be familiar with specialized terms in the field of urban agroecosystems.
- Use active voice and concise sentences to improve readability and engage the audience effectively.
- Consider the logical flow of the manuscript, ensuring that each section transitions smoothly to the next and that the conclusions drawn are supported by the data presented.

By incorporating these detailed suggestions, the author can significantly enhance the quality and impact of the research for international publication.
