# Anlotinib

National Cancer Institute

## Source

National Cancer Institute. *Anlotinib*. NCI Thesaurus. Code C138997.

A receptor tyrosine kinase (RTK) inhibitor with potential antineoplastic and anti-angiogenic activities. Upon administration, anlotinib targets multiple RTKs, including vascular endothelial growth factor receptor type 2 (VEGFR2) and type 3 (VEGFR3). This agent may both inhibit angiogenesis and halt tumor cell growth.
