

Review of: "Crude Oil Spills and Respiratory Health of Cleanup Workers: A Systematic Review of Literature"

Jiin Chyuan Luo

Potential competing interests: No potential competing interests to declare.

This manuscript is well-designed, well-written, but some revisions are needed.

1. The authors should include the articles with the measurements of the metabolites of volatile organic compounds or polycyclic aromatic hydrocarbons in this review.

For examples:

*Thammasin Ingviya, etc. EXPOSURE ASSESSMENT OF RAYONG OIL SPILL CLEANUP WORKERS. Expo Health. 2020 Dec;12(4):617-628.

*Mina Ha, etc. Urinary metabolites before and after cleanup and subjective symptoms in volunteer participants in cleanup of the Hebei Spirit oil spill. Sci Total Environ. 2012 Jul 1;429:167-73.

1. There are several studies with actual estimates of the pollutants from the crude oil, the authors might want to estimate the threshold dose of solvents exposure for the respiratory health problems of oil spill clean-up workers.
