Potential competing interests: No potential competing interests to declare.

The paper provides valuable insights into small-scale dairy production. However, certain aspects could be enhanced to improve overall clarity:

- The title is excessively long and could benefit from brevity to capture the essence more effectively.
- Elaborate on the animals sampled by including information such as breed, age, number of lactations, and births. This will offer readers a more comprehensive understanding of the study subjects.
- Provide a more explicit explanation of the methodology employed for the diagnosis. Specifically, disclose whether laboratory tests were utilized in the diagnostic process. This additional detail will enhance transparency and bolster the credibility of the findings.

By addressing these points, the paper will become more accessible and reader-friendly, ensuring that the audience can grasp the essential information with greater ease.
