Potential competing interests: No potential competing interests to declare.

The Authors focus on "Diabetic foot infections (DFI) are composed of a mixture of Gram-positive (*Staphylococcus aureus*, *Bacillus subtilis*, *Streptococcus*, and *Enterococcus spp.*) and Gram-negative (*Escherichia coli*, *Klebsiella pneumoniae*, *Morganella morganii*, *Enterobacter*, *Pseudomonas*, *Citrobacter*, *Salmonella* and *Proteus sp.*)" bacteria, and *Ganoderma* species are beneficial as antimicrobial agents against these microorganisms.

"There are still several steps that you need to go through before your manuscript will be published. A few general points, kindly clarify it".

1. In PAGE NO 3, *Ganoderma australe*, the Author stated that "These are just a few examples of *Ganoderma* species, and there are many more within the genus such as *G. pfeifferi*, *G. oregonense*, *G. multipileum*, *G. adspersum*, *G. sessile*, *G. lipsiense*, *G. colossus*, *G. curtisii*, *G. lobatum*, *G. mbrekobenum*, *G. sinense*, *G. tornatum*, *G. tuberculosum*, *G. zonatum*, *G. miniatocinctum*, and *G. weberianum*, etc". This paragraph should be written in the section "***Ganoderma* and its species**". Please clarify it.
2. After Authors immediately started "Hypoglycemic activity of *Ganoderma species*" Kindly *incorporate* under the relevant *headings*: **Hypoglycemic activity of *Ganoderma species***". Under this heading, authors can write about the hypoglycemic activity of some *Ganoderma species*. Please clarify it.
3. Table 1: Please write the relevant topic that represents the table contents. Kindly clarify it.
4. Kindly write which purposes *Ganoderma* species are used for in traditional medicine. Check the manuscript again.
5. A genus (or genus group) is always italicized, and the first letter should be capitalized, even when not paired with a species or subspecies name. Please check carefully.
6. Please write Silver nitrate (AgNO₃). Starting a sentence with an abbreviation is generally avoided in formal writing. Check abbreviations thoroughly and write them in the correct place.
7. Write the complete name of a microorganism, for example, *Staphylococcus aureus*, in the whole manuscript.... So make it the same like ...do not write *S. aureus*. Needs to be checked all and corrected.
8. In the manuscript, some were written *Ganoderma lucidum* and some were written *G. lucidum*. Please write the same way. Check all species once again.
9. What is measuring 14.13 ± 0.12 mm, and what is measuring 13.03 ± 0.12 mm? "Measured zone of inhibition with values....., respectively.
10. Please revise your review article carefully.

Thank you.
