

# Review of: "When did post-truth begin? From climate change denial to war-mongering nationalism"

Evert Waeterloos

Potential competing interests: No potential competing interests to declare.

I attach herewith my detailed in text-review. While containing interesting pointers to the interconnection between different elements and phenomena of climate change denial, corporates' policy influencing behaviour, official desinformation campaigns, and the post truth era in USA and beyond, the reader is left swinging between these different elements both in content and in text structure. A more rigid line of argument should be attempted to explore this potentially interesting thesis. In addition, much more attention should be paid to elaborating some of the statements further, solid referencing, spell check and definition of concepts.
