Potential competing interests: No potential competing interests to declare.

This study is interesting. However, some points could need more detailed descriptions in certain sections to improve before acceptance.

1. Provide the reason for loss to follow-up (n=20) in the treated group.
2. Ensure that infertile women post supplementation (n=10) are enough to test the statistical differences as compared to the control group.
3. Please describe the reason why they used a dose of 2 g per day of extract, or as a reference dose from the previous report.
