Review of: "Awareness at the Crossroad of Illusion and the Soul"

Brandon R. Munn¹

1. University of Sydney, Sydney, Australia

An interesting commentary outlining a theory of consciousness and a framework for awareness. I appreciate that the author relates the theory's similarities and differences to various alternative leading theories of consciousness.

For improvements to the theory, I put the challenge to the author to see if there are any predictions that can be made from this framework. For example, can certain timescales of cognitive processing be attributed to each stage that can be tested, or are there components of the framework (e.g., selection/transformation) that can be directly mapped to neural structures/interactions.
