Selective Estrogen Receptor Modulator CC-8490

National Cancer Institute

Source

National Cancer Institute. *Selective Estrogen Receptor Modulator CC-8490*. NCI Thesaurus. Code C38711.

A benzopyran with potential antineoplastic activity. CC-8490 acts as a selective estrogen receptor modulator (SERM), inhibiting the proliferation of estrogen-sensitive breast cancer cells. This agent also inhibits growth and induces apoptosis of glioblastoma cells via a mechanism independent of estrogen receptor-related mechanisms. (NCI04)
