Dear Editors and Authors,

1. The keywords "post vaccine SARS CoV 2 infection" and "vaccine safety" are not included in MeSH. It should be changed.
2. In the "Study Design" and "Sample size" sections, it would be appropriate to give a figure or table number instead of "Detailed questionnaire has been provided in the supplementary material" and "Flow diagram representing detailed sampling approach has been provided in the supplementary material."
3. It should be noted that this article does not give a time frame for side effects and does not clarify whether these side effects are due to the vaccine. The phrase "after the vaccine" is very vague.
4. Terms such as episode 1-2 were not clearly explained to patients during COVID symptom questioning. Episode 1-2 should be clearly stated in the article and in the questions. the period you mentioned and the patient's may not be the same.
5. I would expect a comparison between vaccines in terms of side effects. I wondered if there was a significant difference in terms of side effects. It would be nice to see the p value in the percentage tables you made.
5. The subject is an intriguing subject and well written. Thank you for your efforts.
6. Suggestions can be modified and published.

Kind Regards.
