Potential competing interests: No potential competing interests to declare.

1. There are too many descriptions of research objects in the abstract.
2. In the abstract, the training method, time, evaluation and so on can be put in the method.
3. Is the pelvic floor muscle training is the patient's own home training? How to ensure the training effect?
4. The title of the article is too long.
5. Assessment only used self-assessment, how to avoid subjectivity?
