Obesity due to prohormone convertase I deficiency

INSERM

Source

INSERM. (1999). Orphanet: an online rare disease and orphan drug data base. Obesity due to prohormone convertase I deficiency. ORPHA:71528

Prohormone convertase-I deficiency is the rarest form of monogenic obesity. The disorder is characterised by severe childhood obesity, hypoadrenalism, reactive hypoglycaemia, and elevated circulating levels of certain prohormones.
