Very interesting and novel concept of introducing colored bracelets. I congratulate the authors for their work.

However, I would like to know what the reason was for choosing a specific color. Was it randomly chosen?

The other issues are

What will be the material quality of these bracelets?

Whether metallic? Wash-proof? Elastic or snugly fit? Will they be internationally acceptable by laws of different countries?

Whether such bracelets are already in use for non-oncology drug-related purposes?
