

Review of: "Assessing the Impact of COVID-19 on Food Consumption Preferences"

Jyotir Moy

Potential competing interests: No potential competing interests to declare.

1. The abstract needs to be re-written focusing on the actual research results received.
2. It will be better to write the abstract in a single paragraph, avoid multiple paragraphs.
3. The LR is weak, authors are suggested to include quality works from 2022/2023 in more numbers.
4. No questionnaire sample is presented in the article.
5. Discussion needs more elaboration of the findings.
6. How the participants are identified for the survey is not clear to me.
7. 70 participants is a very small number for survey and should be increased at least to 500 participants.
