Potential competing interests: No potential competing interests to declare.

Dear Author, Good work. However, there are a few points that need to pay more attention.

1. The abstract should be modified to be more attractive for the reader.
2. Introduction: Newly published papers are good to be added to the introduction.
3. Statistical approach: Please express why you chose this method.
4. Discussion should have more discussion and more comparisons.
5. Conclusion should be re-written.
6. English revision is compulsory.

Best,
