Potential competing interests: No potential competing interests to declare.

The manuscript entitled "Larache's Coastal in Morocco: Evaluating Dredging's Impact on Fisheries and Shoreline Evolution," which depicts the consequences of dredging activities from a physical and biological perspective, is written moderately well. However, there are many orthographic errors, which are indicated in the supplementary data. All the tables are inconspicuous; it is suggested to be redrawn. Similarly, there are two discussion sessions (5 and 6) which may be clubbed together for better cohesion of the results.
