Potential competing interests: No potential competing interests to declare.

The research focused on natural resources, ecosystem services, and biodiversity conservation within the context of animal husbandry development is certainly commendable as a model for sustainable progress. However, it is worth noting that the authors might have further enhanced the reliability of their findings by incorporating more recent statistical data and by leveraging contemporary geographical methods.

In addition, it would be considered a more professional approach to outline the methods employed for the assessment of natural resources and ecosystems in their ongoing research. Transparency regarding these methodologies can contribute to the credibility of the research.

Furthermore, building upon the recommendations provided in the Results section, it is crucial to acknowledge the growing urbanization of populations within coastal ecosystems due to socio-economic challenges. Entrepreneurs who capitalize on this situation often lease and exploit these regions without due consideration for biodiversity and geo-diversity preservation. Consequently, addressing and mitigating this global issue should be prioritized as one of the primary objectives
