Potential competing interests: No potential competing interests to declare.

The manuscript needs a few changes.

1. The title should be more specific. For example, what specific hepatoprotective effect does the ursolic acid-oleanolic acid mixture impart? This should be mentioned.
2. Material & Method: Instead of using the word "obtention," please use the word "procurement."
3. Material & Methods: Instead of hepatoprotector, use hepatoprotective.
4. Results: "Obtaining and identification of the UA/OA mixture". This section should be included in the Materials and Methods section instead of the Results section.
5. Figure 2: The microscopic images should have a scale bar. The details of each group should be described in the figure legend instead of the image.
6. The discussion section is undesirably very long, while the data presented is not very complicated or rigorous.
