

# Review of: "General Equilibrium Effects of Investments in Education, and Changes in the Labor Force Composition"

Malik Cahyadin

**Potential competing interests:** No potential competing interests to declare.

The paper is well written. However, the first sentence of abstract is a strong sentence, namely: "a novel approach to modelling education and human capital formation in a computable general equilibrium model". Therefore, the author should provide a theoretical and empirical frameworks (gaps) regarding the relationship between education expenditure and composition / quality of the workforce. This frameworks can be exhibited in Section 2.

In the future, the author can consider to employ Dynamic Systems Approach (DSA) to develop a better understanding of general effects of investment in education, and changes in the labor for compositon.

In particular, I agree with the Prof. Ajit Kumar Singh's comment for number (2). Hence, the author can consider the comment or issue.

Thank you very much
