

Review of: "Incidence risk of major reproductive disorders of dairy cows and cow-level risk factors in Wolaita Sodo town, southern Ethiopia"

Katharina Giebel

Potential competing interests: No potential competing interests to declare.

An important and relevant study adding to the evidence base of reproductive disorders in dairy cows in Ethiopia. As other mentioned there are some editorial issues and there are some shortcomings in the statistical analysis. The number of animals investigated is quite low so results need to be interpreted considering that. Perhaps other disorders related to reproduction could have been assessed.
