Potential competing interests: No potential competing interests to declare.

The topic of this article is current and is part of the priority themes of sustainable development.

I congratulate the author for the topic of the article. India is a special and sensitive case, where the intellectual capital from the university plays an important role in the efficient and effective implementation of smart and dynamic city concepts. A brief presentation of the country, the population, the population density in the main cities, the age pyramids give substance to the research.

The title, abstract and conclusions are relevant to the reader. They must be clearly worded and linked.

The abstract should contain sufficient information to enable the readers to appreciate the nature and significance of the subject. It must highlight the objectives of the article, the research method, the method of data collection and processing and the main results. In order to increase the visibility of the article, the abstract should contain the key words and phrases, defining for the article in question, avoiding repetitions.

Selecting 4-6 keywords in descending order of their importance can help the reader capture the essence of the paper.

Conclusions should focus on the main results of the research. Future research directions and limitations of the article should be presented at the end of the conclusions.
