# Peripheral Lymph Node Addressin

National Cancer Institute

## Source

National Cancer Institute. *Peripheral Lymph Node Addressin*. NCI Thesaurus. Code C106319.

A group of sulfated sialomucins that share a carbohydrate epitope synthesized by N-acetylglucosamine 6-O-sulfotransferase. The glycoproteins with this modification include sulfated ligands for L-selectin and are involved in tethering and rolling of lymphocytes along high endothelial venules (HEV) of lymphoid tissues.
