Type II Acrocephalopolysyndactyly

National Cancer Institute

Source

National Cancer Institute. *Type II Acrocephalopolysyndactyly*. NCI Thesaurus. Code C98873.

An extremely rare autosomal recessive syndrome characterized by premature closure of cranial sutures leading to cone-shaped head, fusion of the digits, and the presence of more digits than normal. It may be associated with heart defects, single horseshoe-shaped kidney, short stature, undescended testes, and mild mental retardation.
