# X-linked Thrombocytopenia, with or without Dyserythropoietic Anemia

National Cancer Institute

## Source

National Cancer Institute. *X-linked Thrombocytopenia, with or without Dyserythropoietic Anemia*. NCI Thesaurus. Code C136653.

An X-linked condition caused by mutation(s) in the GATA1 gene, encoding erythroid transcription factor. It is characterized by thrombocytopenia, as well as abnormal platelet function and morphology. Dyserythropoietic anemia of variable severity may also be present.
