Potential competing interests: No potential competing interests to declare.

This paper is commendable for its presentation of the topic, selection of variables, and the choice of data type, particularly when dealing with rare data.

In the results section, four models were selected, even though the research primarily focuses on the process of variable selection within the context of the generalized extreme value regression model.

It is essential to emphasize the significance of constructing these models following the variable selection process.

The paper contains numerous grammatical errors.
