Potential competing interests: No potential competing interests to declare.

This paper presents relevant concerns regarding the Abrolhos-Trindade faunal complex and should be published. Authors should consider informing the source information for ecoregions recognized (a suggestion is left in the attachment).

Voucher specimens should be listed in the manuscript in order to give the reader the opportunity to check identity information. Contents are relevant and well-written.

This is a sign review. I take this opportunity to congratulate the authors on the study. I am sure that it will be very useful.
