Potential competing interests: No potential competing interests to declare.

The Authors aimed to use advantage of the large number of published research works on Copper Nanoparticles in the treatment of skin infections, to highlight their efficacy specifically against viral skin infections.

I believe it is important for the Authors to carefully review the requirements for writing a scientific review, and how to structure and organize ideas for writing a review.

below is a link that could help:

<https://scientific-publishing.webshop.elsevier.com/research-process/writing-a-good-review-article/>

I also attached two documents: the first is an example of a published review, the second is an article about how to write a review.

The submitted review needs substantial amount of work to make it an acceptable review that could help research community.

In the actual form, this review article do not meet the minimum requirements to be published.
