## Comments to the Author

Review Title: "Green Strategies for the Synthesis of Quinolone Derivatives" by Akter et al.

### Comments:

1. The presentation of schemes and tables in the review is subpar. The inclusion of tables for each scheme seems unnecessary. However, for each scheme, a mechanism is redundantly drawn, and below each scheme, the substrate scope of the scheme is presented in Tables. It is advisable for the authors to redraw all schemes and eliminate all accompanying tables.
2. The references section appears disorganized within the manuscript.
3. The length of the review should be reduced. Upon thorough evaluation of the review, I do not recommend its publication in Qeios.
