# Pyruvate Kinase Inhibitor TLN-232

National Cancer Institute

## Source

National Cancer Institute. *Pyruvate Kinase Inhibitor TLN-232*. NCI Thesaurus. Code C67087.

A synthetic cyclic heptapeptide with potential antineoplastic activity. Pyruvate kinase (PK) inhibitor TLN-232 targets pyruvate kinase M2 (M2PK), which may disrupt tumor cell anaerobic glycolysis. M2PK is a dimeric isoform of PK and the predominant PK isoform found in tumor cells
