

Review of: "Raising Adaptive Capacity to Climate Change in Energy and Food Sectors of Egypt"

Khem Dahal

Potential competing interests: No potential competing interests to declare.

Abstract: Paragraph 1: Third and fourth sentences have no smooth link: energy, climate change, agriculture, energy, and GDP

Introduction:

1.1. Generally, the aim is put at the end of the introduction chapter after having written about the importance of the issue and the need for the present research.

1.2. This part should be started from the basics of the adaptation status and its link with agriculture, climate change, energy, and food.

1.3. This should be put in a separate subheading as Methodology and should clearly mention the source of data and the model.

Results and Discussion

Generally, start your writing with your results to show what you found from your research and relate the findings of other authors, and discuss whether the research is in line with others or different; if so, why? It is advised to follow the suggested pattern throughout the draft. The research is good and the information is useful but needs refining in the writing to adhere to the flow of coherent information.
