Potential competing interests: No potential competing interests to declare.

The paper approaches an important WHO-promoted strategy that significantly impacts vector-borne disease control. However, the paper fails to include Indonesia's successful research results in dengue control in Yogyakarta, published in 2021 (*N Engl J Med* 2021; 384:2177-86. DOI: 10.1056/NEJMoa2030243), which can illustrate the concrete impacts of this strategy. The author can improve the paper with a systematic review of promising study results conducted in Indonesia and abroad.
