This review about the evolution of Covid-19 is well written and clear,

Below I report some suggestions:

1. The Figure 1A is interesting but I think that there is too much annotation. In my opinion, to be more clear is needed a summary of the information reported.
2. In Figure 1 legend the authors write " This figure demonstrates the factors that will propagate a pandemic situation". I suggest changing the word "demonstrates" with "describe" because is not related to data but is just a summary of the knowledge until now.
- 3.The same word should be changed in Figure 1B.
4. The sentence "In most viruses, the use of treatments and vaccines causes them to evolve ways of escaping these protective measures so they can continue to spread" seems to suggest that the treatment or vaccines could be "dangerous" because allow the virus mutation. In my opinion, despite the concept is right, the authors should explain better this concept, because both the vaccines and the treatments are mandatory and is not an alternative.
- 5.There are a few typos that need to be corrected.
