Potential competing interests: No potential competing interests to declare.

Tools for classifying and/or summarising clinical features and/or for quantitating their intensity or significance for practical or research purposes. Clinimetrics encompass algorithms for disease classification and diagnosis, scales for estimating the degree of disease activity, accrued damage or chronic morbidity, indicators of patient quality of life and subjective feelings, indices of treatment response and estimators of the risk of complications. Clinimetrics may refer to a specific timepoint or be sensitive to changes over time and may yield a single comprehensive score/result or more complex outputs. The output(s) may consist in a set of discrete numerical or logical values or be composed by continuous quantitative variables.
