

Review of: "Air Swallowing and Breathing Exercises Reduce the Severity of Acute Gastroesophageal Reflux Symptoms and Give a Clue into the Role of Oxygen in Digestion: A Case Report with Extended Discussion"

د. عبير منصور

Potential competing interests: No potential competing interests to declare.

The title is clear and concise, providing sufficient information without being overly long. This helps attract readers and keep them engaged. The title effectively describes the content and objectives of the study, conveying several positive aspects:

Treatment Description and Expected Impact: The title indicates the treatments used (air swallowing and breathing exercises) and their expected effect on acute gastroesophageal reflux symptoms. This provides readers with a clear idea of the study's content and intended outcome.

Hint at a New Idea: By stating "Give a Clue into the Role of Oxygen in Digestion," the title introduces a new idea or hypothesis that the research will explore. This arouses curiosity and prompts readers to want to learn more about the potential conclusions of the study.
