**Potential competing interests:** No potential competing interests to declare.

The review is otherwise well-written but too succinct.

In fact, it needs more details (especially about other previous articles published on this topic), and finally, it also fails to supply a well-defined message (missing at least a brief conclusion). This brief summary reported general information and some specific details which lack UpToDate references.

I suggest the authors add a sort of conclusion and summarize all the reports in some table (it will be simpler for the readers).

Generally, the authors, however, have done good work and are encouraged to keep working in this field because there is a lot of missing information (especially in Dentistry) about the precise way to prescribe antibiotics.
