Acute myeloblastic leukemia without maturation

INSERM

Source

INSERM. (1999). *Orphanet: an online rare disease and orphan drug data base. Acute myeloblastic leukemia without maturation. ORPHA:98833*

Acute myeloblastic leukemia without maturation is a rare, acute myeloid leukemia characterized by no significant myeloid maturation and more than 90% blast cells in the non-erythroid population. Various degrees of anemia, thrombocytopenia, or pancytopenia are present. Frequent clinical manifestations include fatigue, fever, bleeding disorders, and organomegaly, especially hepatosplenomegaly.
