

# Review of: "Multivariate Time-Series Data Generation in Generative Adversarial Networks"

Haizhou Du

Potential competing interests: No potential competing interests to declare.

1. As far as I know, the existing GAN almost generate data through noise, Why do the authors says it is a new method?
2. What's related works for this issue?
3. The details of the CIDS \_ 2017 dataset need to be supplemented.
4. Please add some visualization results that can prove the reliability of the experiments.
5. What does it mean to compare the results of experiments? The authors need to supplement this part in the manuscript.
