

Review of: "High sensitivity Troponins In Patients with elevated prohormone of beta natriuretic peptide and acute heart failure (HIGH TRIP Trial)"

Nicoletta Mancianti

Potential competing interests: The author(s) declared that no potential competing interests exist.

In this study in acute emergency room patients with heart failure, the addition of the test (Hs-cTrop I) to the laboratory test panel helped predict mortality and re-hospitalization rate.

This data is interesting for daily clinical practice.

The analysis should be in-depth regarding patients with kidney injury insufficiency in which sometimes the Hs-cTrop I value is sometimes reliable.
