Potential competing interests: No potential competing interests to declare.

The present study is on college students in the United Arab Emirates and aims to analyze their attitudes towards the effects of social media addiction. In particular, the author investigated sleep problems in association with social media addiction.

The article is interesting and well-written. The length is appropriate, as are the references. I have only a few suggestions.

Firstly, I suggest deleting the final part of the introduction; the description of the study conducted should be in the methodology, not in the introduction. Instead, at the end of the introduction, the author should report the research objectives and research hypotheses.

Secondly, I suggest inserting a brief discussion before the conclusions.

Finally, the author wrote about model 6 of PROCESS. It might be useful for the reader to have the diagram of model 6 with the respective results. Furthermore, additional analysis on the demographic characteristics of the participants is needed.

Kind regards,
