ACKR1 wt Allele

National Cancer Institute

Source

National Cancer Institute. *ACKR1 wt Allele*. NCI Thesaurus. Code C78152.

Human ACKR1 wild-type allele is located within 1q21-q22 and is approximately 3 kb in length. This allele, which encodes atypical chemokine receptor 1 protein, plays a role in the mediation of cellular interactions with cytokines. Polymorphisms in the gene are the basis for the Duffy blood group types.
