Potential competing interests: No potential competing interests to declare.

1. How does the epidemiology of temporal lobe epilepsy (TLE) vary across different regions, and what are the factors contributing to these variations?
2. Discuss the historical context and early discussions surrounding TLE's forensic implications. How have perceptions of TLE and its impact on behavior evolved over time?
3. What role does the international classification for epilepsies play in diagnosing and managing TLE, and how does it aid in legal contexts?
4. Explore the challenges associated with diagnosing TLE in legal settings. What factors complicate the assessment of TLE-related behaviors and their forensic implications?
5. How do neuroimaging techniques contribute to identifying the epileptogenic focus within the temporal lobe, and what significance does this have in legal proceedings?
6. Examine the relationship between TLE, psychosis, and substance use concerning legal liability. What complexities arise when attributing criminal behavior to TLE-related symptoms?
7. Discuss the risk of sudden unexpected death in epilepsy (SUDEP) and sudden unexpected death in childhood (SUDC) associated with TLE. How does this risk factor into legal considerations and patient management?
8. What gaps exist in current research regarding TLE's forensic and medicolegal implications? How can future studies address these gaps to enhance our understanding of TLE's legal ramifications?
9. Reflect on the broader implications of the narrative review's findings for clinical practice, legal policy, and research agendas related to TLE and epilepsy more broadly.
10. Consider the potential implications of TLE on legal responsibility, patient rights, and public safety. How should these factors inform decision-making in legal and medical contexts?
