Dear authors, here are some considerations regarding your paper:

1. Please insert the in text citations after all affirmations; eg: Line 1-2; 6-7 and through the text.
2. The introduction is well constructed, however is overly long. I recommend ending the introduction section in the line where the aim of the study is described.
3. The methods section is very well constructed and described. I'd only suggest that subtopics were implemented regarding the steps of the research.
4. The discussion section would be implemented if organized regarding the obesity, health expenditure and non-communicable diseases in topics or paragraphs.
