Review of: "Carbon Inequality: Resolving Contradictory Results From Two Different Approaches"

Amaro Pereira¹

1. Energy Planning, Universidade Federal do Rio de Janeiro, Brazil

General comments

The authors bring an interesting comparison of two different approaches to assess carbon inequality, highlighting the pros and cons of each one. The subject is worth investigating and should be shared with the scientific community after minor review.

Specific comments

The data sources are missing in the figures.

I suggest the authors propose policy recommendations, based on their conclusions, considering rich, middle, and poor countries.
