# Nodal Peripheral T-Cell Lymphoma with TFH Phenotype

National Cancer Institute

## Source

National Cancer Institute. *Nodal Peripheral T-Cell Lymphoma with TFH Phenotype*. NCI Thesaurus. Code C139011.

A nodal peripheral T-cell non-Hodgkin lymphoma in which the neoplastic lymphocytes manifest a T follicular helper (TFH) cell phenotype. These lymphomas frequently show a diffuse infiltration pattern without a prominent polymorphic inflammatory background, vascular proliferation, or expansion of follicular dendritic cell meshworks. In some cases, a so-called T-zone pattern may be evident. (WHO 2017)
